Advanced Cyber Security Solutions

In the new cyber world our ability to respond and react to advance attacks depending on two main elements, one is the humans who understand and have the ability to react, two is the analytics and information's available so we can know if we are acting in a right direction and with right tools, thus we are introducing the two most advanced and practical tools , cyber Range and Reputation Protection and Analytics tools;

Cyber Range

Our Cyber Range simulates a real-world Cyber Attacks including a virtual corporate network and leveraging commercial security products. It accurately simulates attack scenarios to provide an immersive experience that prepares trainees to react to attacks effectively, it will also test your incident response plans and rate your staff capabilities and areas of improvement.

Brand Name Protection

Green Circle reputation protection service's for social media is an integrated system for protection personnel & organizations from reputational abuse or exploitation on the web, which is explained in the diagram below:
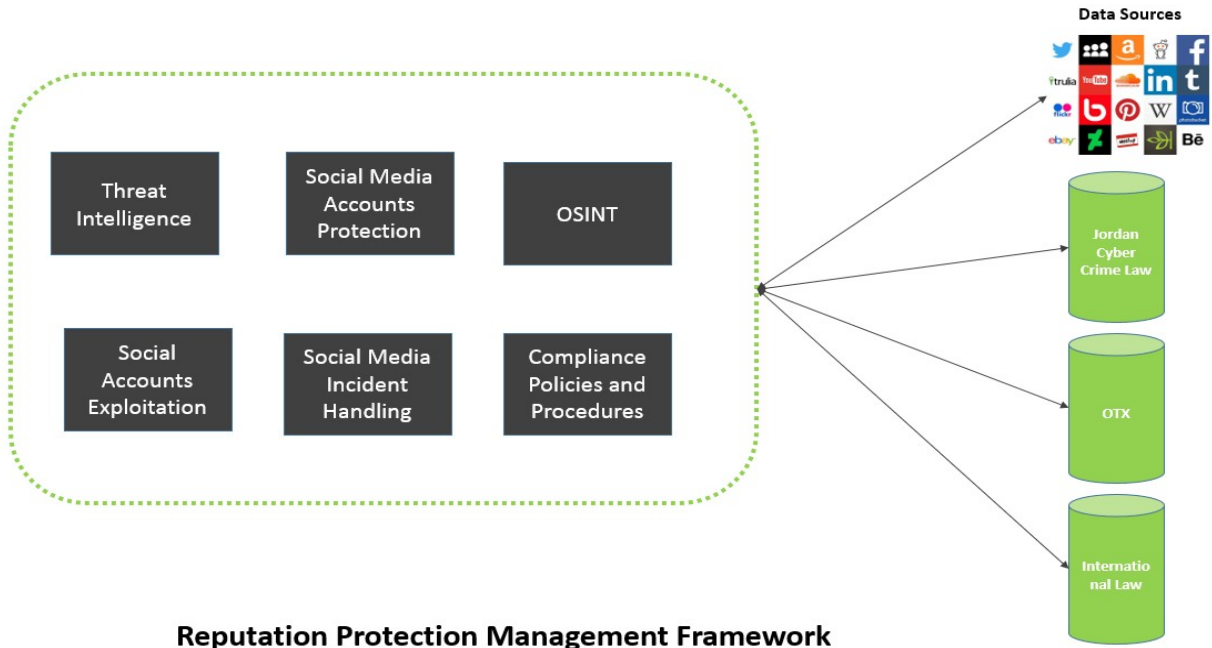

Reputation Protection Management Framework

Cyber warfare

Cyber warfare involves the actions by a nation-state or international organization to attack and attempt to damage another nation's computers or information networks through, for example, computer viruses or denial-of-service attacks.

RED Team

Red team services are a vital tool for any organization's cyber security as a proactive approach providing essential insights regarding probable threats and vulnerabilities.

SOAR

A SOAR platform is designed to help security teams manage and respond to endless alarms at machine speeds. SOAR platforms take things a step further by combining comprehensive data gathering, case management, standardization, workflow and analytics to provide organizations the ability to implement sophisticated defense-in-depth capabilities.

SecOPS

SecOps is the practice of aligning Security, IT, and Development teams through a shared set of data and tools. This shared visibility, supported by analytics and automation, creates a common language for teams that breaks down barriers and ultimately accelerates innovation.

Threat Intelligence

We provide real time Threat intelligence with commercial or opensource feeds to stop real time attacks.
